# SSO

The simplest way to secure and streamline your Feefo access

Keeping your data secure requires strong passwords. But multiple systems each requiring separate security makes it hard to remember what you've set. Single Sign On can help you manage passwords across your team.

With Single Sign On, you and your team sign into Feefo with your existing work password. You'll also benefit from:

- Enhanced security with fewer security risks
- Faster logins, as your team uses their existing work password
- Complete control over access for your entire team
- Industry standard compliance for your peace of mind

Adding Single Sign On for Feefo provides a simpler experience and keeps your systems secure.

Data security is our priority

Keeping data secure is an essential part of your business, especially when it comes to customers' personal data. To demonstrate our commitment to keeping information secure, we hold the BSI Certificate ISO 27001, a global standard for businesses with information security management systems.
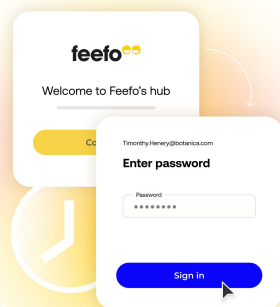

All data we hold or transmit is encrypted, and our infrastructure is secure and up to date with the latest security patches and firewalls.

Read more about our approach to security here.

How to set up Single Sign On for Feefo

Getting started with Single Sign On couldn't be easier.

1. Tell us you want Single Sign On for your Feefo account, and we'll set it up.

2. We connect your login system to ours, whether it's Google, Microsoft, or another provider.

3. When you next go to the Hub login page, you'll enter your email address. The next screen you'll see is the password entry screen of your SSO provider. You enter your work password, and you'll gain access to the Feefo Hub.

Save time and stay secure. Get in touch with our team, and we'll enable it for you.
